PROFESSIONAL SUMMARY

Backend Developer specializing in scalable backend systems, RESTful API design, and distributed application architecture using **Node.js, Express.js, and MongoDB**. Experienced in building fault-tolerant services, queue-driven processing pipelines, and **blockchain-integrated backend infrastructure**. Passionate about designing reliable production-grade systems for high-throughput applications.

TECHNICAL SKILLS

- **Backend:** Node.js, Express.js, RESTful APIs, JWT Authentication, Role-Based Access Control, Background Jobs, Queue-Based Processing, Concurrency Handling, Retry & Backoff Strategies
- **Frontend:** React.js, JavaScript
- **Database:** MongoDB (Mongoose), MySQL, Schema Design, Query Optimization
- **Blockchain / Web3:** Solana Web3.js, Raydium SDK, DEX Integration, Wallet Management, On-chain Transaction Automation
- **Tools & Cloud:** AWS S3 (Secure Object Storage), AWS Secrets Manager, IAM Access Control, CI/CD Pipelines, Git, Github, Postman, VS Code
- **Architecture & Backend Engineering:** Scalable Backend Architecture, Distributed Systems, System Design, API Performance Optimization, Event-Driven Processing, Queue-Based Architecture, Concurrency Control, Fault-Tolerant Systems

PROFESSIONAL EXPERIENCE

Senior Software Developer

String Metaverse Pvt Ltd | June 2023 – Present

- Designed and maintained scalable backend services supporting financial workflows, operational tooling, and blockchain-driven game systems.
- Built and optimized APIs and dashboards to track **partner payouts, in-game transactions, and operational metrics** with real-time data visibility.
- Engineered reliable backend workflows for transaction processing, reward logic, and data consistency across multiple system modules
- Collaborated cross-functionally to translate business and Web3 requirements into scalable backend architecture and maintainable services.

PROJECTS

Game Backend Systems (String Drive & Tetris Games)

Node.js, Express.js, MongoDB

- Developed backend services supporting concurrent gameplay, session management, real-time scoring, and reward distribution across multiple game modules
- Designed secure RESTful APIs enabling gameplay actions, leaderboard updates, and persistent player state management
- Built **JWT-based authentication** and **role-based access control** for admin operations and game configuration.
- Structured MongoDB schemas and query patterns for efficient event handling and responsive gameplay workflows.
- Focused on **low-latency API responses** to ensure smooth, responsive gameplay experiences for concurrent users.

Web3 Trading, Market-Making & Liquidity Automation Platform

Node.js, MongoDB, Solana Web3.js, Raydium SDK, Blockchain SDKs

- Built production-grade Web3 backend platform integrating automated trading workflows, liquidity management logic, and blockchain transaction orchestration.
- Implemented queue-driven execution pipelines with retry logic, validation layers, and failure recovery for reliable on-chain transaction processing.
- Designed secure systems for **wallet management, role-based access control, and large-scale financial data processing**, enabling automated decision-making with minimal manual intervention.

EDUCATION

- Bachelor of Technology | Mandava Institute of Engineering & Technology | Apr 2017 - Jul 2021 | CGPA: 7.01
